

# RF Product Application Engineer – UK

## Description

This position is aimed to providing global technical support on Lime's products by contributing to the selling process internally with the sales team members as well as externally with our customers. The candidate will be the link between Engineering and the field.

### Major Tasks

- Assist the sales team at customers during the design phase of Lime's products
- Bring the system level expertise to customers and partners
- Train the sales team on Lime's solutions
- Participate in the definition and writing of the materials such as data sheet and application notes
- Perform test measurements required for field tests, including the customer support within the certification process.
- Maintain a state-of-the-art RF lab and develop test tools to help customers implementing our products

### Required Experience

- 5 years minimum of experience within the semiconductor and telecommunication markets
- Previous experience in Customer support
- Experience in RF Design
- System-level expertise of wireless devices
- Excellent communication skills, both written and oral
- Engineering degree
- Fluent English
